

DVD Rental Company - ER Model

Assumptions

1. Only a staff member's current branch is stored; re-assigning staff updates staff.branchNo, and no history is kept.
2. The manager is a member of staff; branch.managerStaffNo references staff. Every branch has exactly one manager, and a staff member manages at most one branch.
3. Every branch has at least one staff member (its manager).
4. The daily rental cost is set per movie per branch, so it is stored once in branch_movie rather than on every copy.
5. A branch_movie row exists only if the branch holds at least one copy of that movie; a movie may not be stocked at any branch.
6. A member must register at at least one branch; dateRegistered is stored per registration because it differs by branch.
7. Each rental covers one DVD copy. The member's name and number, the DVD's title, and the daily rental cost are retrieved through joins rather than stored in rental.
8. dateReturned is empty until the DVD is returned.
9. The ten-DVD limit and renting only from branches where the member is registered are business rules enforced by the application, not by the table structure.
